EDUCATION

10/2023–Now	DPhil Mathematics University of Oxford Supervisor: Professor Stuart White
03/2021-11/2022	MSc. Master of Science (Mathematics and Statistics) University of Melbourne Major: Pure Mathematics Thesis: Wedge product matrices and applications
	Wedge product matrices are developed as a generalisation to the deter- minant of a square matrix with entries in a commutative ring. In tandem with a method Robert Steinberg used to prove a variant of the Bruhat decomposition, the two ideas were applied to various problems in linear algebra. Notably, they were used to generalise the eigenvector-eigenvalue identity and the notion of a quasideterminant in a non-commutative ring. They were also applied to the construction of representatives of two differ- ent matrix orbit spaces.
	Supervisor: Professor Arun Ram
03/2018-11/2020	BSc. Bachelor of Science University of Melbourne Major: Mathematics and Statistics Specialisation: Pure Mathematics

TEACHING

10/2023 - 12/2023 Teaching assistant for Functional Analysis I B4.1

Prepared for and taught one set of classes (four classes total) with the class tutor. Also marked the students' submitted work before each class.

ACHIEVEMENTS

Mathematics and Statistics Masters Scholarship
Three payments of \$2000 corresponding to the first three semesters of the Master of Science degree in recognition of consistent academic achievement throughout the degree.
Dean's Honours List
Awarded for an average mark which lies in the top 3% of students in the Bachelor of Science degree.
Melbourne National Merit Scholarship
A payment of \$5000 in recognition of academic achievement during Year 12, the final year of high school.
2017 Yuroke Award
Awarded for outstanding academic achievement, leadership and service. In particular, it was awarded for my mentoring of students in mathematics, ranging from Year 12 Mathematical Methods to first year university calculus and linear algebra.

PREPRINTS AND PUBLICATIONS

1. Y. Chan. Wedge product matrices and orbits of principal congruence subgroups, Lin Alg App. **696**, 2024, Pages 1-28.

CONFERENCES ATTENDED AND TALKS DELIVERED

12/06/2024 - 14/06/2024~ UK Operator Algebras Conference, Newcastle University, Newcastle upon Tyne.

Gave a five minute talk titled "Nuclear dimension and graph C*-algebras".

15/03/2024 - 16/03/2024 Operator Algebras in the South, University of Oxford, Oxford.

6/11/2023 - 10/11/2023 – Twinned Conference on C*-Algebras and Tensor Categories, ICMS, Bayes Centre, Edinburgh.

SKILLS

Coding experience with Python

2021 Quantum chemistry project for the subject COMP90072

Used NumPy to implement the Hückel method in order to model the energy levels, electron densities and bond orders of conjugated organic molecules. The Hartree-Fock method was also implemented to compute the orbital energies of small atoms with occupied 1s and 2s orbitals and diatomic molecules comprised of these atoms.

LANGUAGES

English (Native)
